

Phases of RUP

Inception Phase:

Define project scope and purpose.

Identify key requirements and use cases.

Create a business case and initial project plan.

Objective: Understand what to build.

Elaboration Phase:

~~Require~~ Refine requirements and architecture.

Create detailed use cases and system design.

Establish system architecture.

Mitigate major risks.

Develop an executable prototype.

Objective: establish a stable architecture.

Construction Phase:

Develop and integrate software components.

Perform testing and verification.

Build the product incrementally.

Implement and test components.

Prepare for deployment.

Objective: Build a working system.

Transition Phase

Deploy software to end users.

Perform user training and maintenance.

Deliver product to user.

Conduct beta testing and bug fixing.

Objective: Deliver the final product.
